

## Project Plan for Business Plan and Product Display System

1. **Project Overview:** This project aims to create a business plan that includes a product display system. The system will showcase products visually, allowing users to click on a product image to view its description and price and on click of the place order will display the signup page when the client has never signed up the signup page should include the following fullname, emails, phonenumber Safaricom and location where the product should be dropped and details to be saved on database .
2. **Use the languages below.** CSS, javascript for functionality especially onclick function, html but inside php code for connection of the database thus index code should be saved as index.php and not index.html. on database connection we will integrate using sq-lite platform

### 2. Objectives:

- Develop a structured business plan.
- Design a user-friendly product display system
- Ensure product details (image, description, price) are accessible on click.

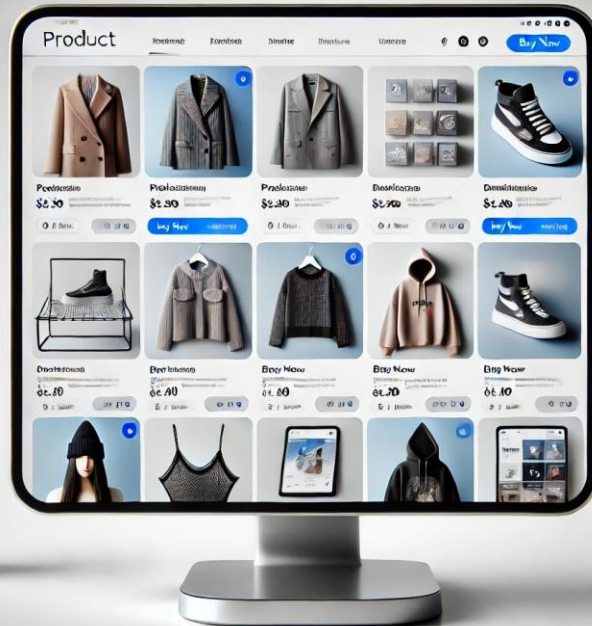

Ensure you adhere yourself to the plan so by tomorrow we will be somewhere

If you choose to work on CSS please wait for PHP files do not be in a hurry

Below is an example on how the website should look like
